

ekorSYS units: protection,  
telemangement & communication

## ekorSOFT

Configuration software for protection  
and integrated control units

Reliable innovation. Personal solutions.

## Preface

ekorSOFT is the programming software for all the ekorSYS protection, metering and control units:

- » ekorRPG
- » ekorRPT
- » ekorRPGci
- » ekorRPTci
- » ekorRCI
- » ekorRPS
- » ekorRPS-TCP
- » etc.

➔ The ekorSOFT software is a tool for helping to set and monitor the parameters of the protection, metering, signalling and control units from the ekorSYS family.

## Applications

- » Presentation of meterings
- » Voltage presence/absence reading display
- » Protection and detection settings
- » Digital inputs/outputs status
- » Remote action on outputs
- » Settings files creation in emulation mode or connection to units
- » Edition of curves and settings log in text documents
- » Fault log
- » Input and output test from the dispatching center

## Illustrative index of menus

### Display

Provides information on status of installation assembly.

- » Current reading
- » Presence of voltage / voltage values (according to relay version)
- » Date and time
- » Settings
- » Inputs / Outputs
- » Relay version

### User settings

Enables the introduction or change of the operational values of the parameters.

- » Current functions
- » Recloser function
- » Voltage presence indicator
- » Unit parameters
- » Inputs / Outputs
- » Load, save and print settings
- » Print curve
- » Sectionaliser
- » Communications

### History Logs

Provides information on data from most recent events and on the total number of operations performed per unit.

- » Fault log

### Test mode

**Provides information on inputs/outputs to the unit that transmits it to the control post without requiring to cut off the supply.**

- » Inputs
- » Outputs
